

## Press Release

From 17<sup>th</sup> to 19<sup>th</sup> of June in Burgundy

### Euroforest 2010: Fire on the energy wood

The international forest exhibition organized in Burgundy during the 17, 18 and 19th will be the annual meeting for the energy wood professionals. Already at the last edition in 2006, the energy wood was present. This time, the implementation will be even higher.

If we compare to others specialized energy wood exhibitions, Euroforest takes up the entire chain of energy wood. Professionals have the opportunity to demonstrate directly their equipments during demos which are always a show. This is the result of having a fair where resources are.

In deeper details, we are talking about the grinders categories, from the biggest machines to the smallest unit which can be admired by gardening companies. The fire wood will also take place with a wide range of impressive combined cutting-splitting equipments. There will also be the granules sections with the pellets press machines, with equipment nearly used domestically.

The downstream of the forest sector will also be there, with energy wood operators and the main wood boilers manufacturers. To facilitate the visitors flow, the organization will provide with an "expert path". A map will inform through the hundred of exhibitors, the products and services in relation with energy wood.

The energy wood, on which a high number of professional invests for the future, will also be developed during a thematic conference, organized by the Territory Entrepreneurs (Entrepreneurs des Territoires) on the site.
